

SOFT SOLE BABY SHOES

Liliputi®

“

I highly recommend Liliputi shoes for babies learning to walk, as a perfect alternative to walking barefoot.

MD, Pediatric Orthopedics

CONGRATULATIONS ON YOUR NEW LILIPUTI® SHOES!

Most experts agree that toddlers learning to walk should be barefoot as much as possible. However, it is not always possible to be barefoot. In Liliputi® soft sole shoes your child can enjoy the same benefits as being barefoot.

- The feet can grip the uneven ground, thus constantly stimulating and exercising the toes and sole muscles.
- Your child can move the feet around freely and tiptoe easily.
- Sense of balance and coordination develop naturally.
- Reflex zones on the sole are regularly stimulated contributing to the neurological development of the whole body.

Liliputi® soft sole footwear are ideal for babywearing, for indoor use and especially recommended when learning to walk, for babies who are already mostly on their feet. Our shoes are not suitable for activities causing strong physical impact on the soft leather (such as crawling, hiking, playing soccer or when using a balance bike). They were primarily designed for indoor use, but in dry weather they can also be used while out and about (especially on natural soil).

OUR SHOES ARE ONLY MADE OF BABY-FRIENDLY MATERIALS

Leather: Toxin free coloured leather for comfort and protection. Please note, that colours may leak when exposed to moisture.

Microfiber: Eco-friendly, breathable microfiber lining. The sole of paw models are made of vegan leather with an anti-slip PU layer.

Wool: to keep the little feet warm and cosy.

SUSTAINABLE PRODUCTION

Our products are hand crafted by skilled shoemakers in our Szombathely workshop, in the Western part of Hungary. When sourcing base materials from the European Union, selecting packing materials or designing production processes we strive to produce the best quality while posing as little environmental burden as possible.

MOISTURE PERMEABILITY

Our soft sole footwear is not waterproof. In rainy weather change to rubber sole shoes. In case your soft sole shoes get wet, simply let them dry on a drying rack at room temperature. Do not place it on a heater nor use a hair dryer.

GROOMING & CARE

Clean with slightly damp cloth if needed, then leave them to dry at room temperature. Occasionally they can be treated with shoe polish. In case of leather soled shoes regularly check their anti-slip feature, and rub slightly with sand paper if needed.
